MOTO LED flashers may not work properly without optional parts.

■ Important note for using LED flasher

LED flashers have very low consumption and the stock flasher relay may not work properly. The most frequent problem, is that the LED may flash at a quick rate using stock flasher relays. Please refer to the chart below to choose our IC relay or Resistor wire for your installation.

	Electric consumption	Difficulty of installation	Parts cost	AC or DC
IC Relay	Low	Skills required	Cheap	DC
Resistor wire kit	Same as stock	Easy	Reasonable	DC/AC

* DRC IC Relay can not be used with motorcycles (XR50/100M, XLR250, WR250F/WR450F, XR650 etc) due to the AC power design. Please use Resister wire kit for AC power motorcycle.

DRC MOTOLED INDICATOR WIRING

This kit is required when flasher operates like hazard indicators after the IC relay installation.

Place these harnesses in-between the wires from the pilot lamp and the wires from the chassis.

* Some models (*3) require this kit for proper operation.

*3 ----- XR230, KSR110, KLX250, D-TRACKER-'07 etc.

Part #

D45-91-051

DRC MOTOLED RESISTOR WIRE

When standard bulb flasher is replaced by LED flasher, electric consumption becomes low and stock flasher relay does not work correctly. This Resistor wire helps stabilize the electric power to the LED flasher from stock flasher relay.

: Electric power consumption level is the same as with stock flasher.

: Easy installation.

: One resistor per flasher.

* Some models (*2) require 2 resistors.

: This harness will produce heat when used. Please install in areas where heat is not a problem.

*2 ----- XR230, DR250R, DRZ400S/SM etc.

Part #

D45-90-710

DRC MOTOLED IC RELAY for DC

Stock flasher relay is designed to work with standard bulb flashers.

When the stock flasher is changed to LED flashers, the stock flasher relay does not work properly due to the difference in power consumption between the stock flasher bulb and the LED flasher. This IC Relay enables LED flashers to work in any configuration.

* Some models require the use of the stock IC relay along with this IC relay. (*1)

: Reduced electrical power usage.

: Some technical skills required for installation.

: One IC relay required for each bike.

: Flasher pilot light can not be used with position light when installed on XR250.

: If the flasher operates like hazard indicators after installation, Indicator lamp wiring kit is required.

: Works on 12V DC.

Can not be used with WR250F/450F

*1----- RMX250S, DRZ400S/SM etc.

Part #

D45-69-830

Installation of the LED flashers requires special knowledge and technique. Please contact your local dealer if you have any question upon installation.

Protects the meter from scratches, dirt and UV!

Hard type (PET)

Works for the instrument panels with a flat surface.

Soft type (TPU)

Works for meter instrument panel with curved surfaces and 3D shapes. It adheres to curved surfaces and is difficult to peel off.

When applying to a spherical or curved surface, work carefully so as not to create wrinkles.

DRC WIDE FOOTPEG

- Durable steel wide foot pegs.
- Made of chromium molybdenum steel for extreme durability.
- 50 mm step width provides better grip and control.
- Mid, High (5 mm higher than medium peg position) and Low (5 mm lower than medium peg position) are available for rider's body type or use. (Excluding some models.)
- Black powder coating finish.

* Foot peg height may differ from stock peg height on some models.

High gravity point allows for easy lean on the bike.
Good for shorter riders.

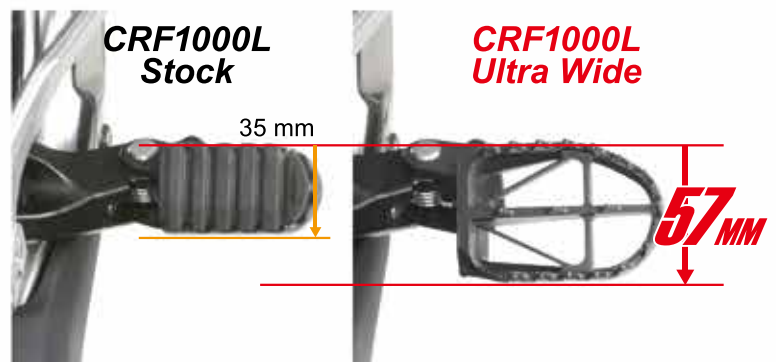

Low gravity point provides better traction during standing ride.
Good for taller riders.

DRC ULTRA WIDE FOOTPEG

- Wider foot pegs than our DRC foot pegs for pro use.
- 57 mm width foot pegs provides better foot peg traction and control.
- Made of chromium molybdenum steel for extreme durability.
- Black powder coating finish.

REAR SUSPENSION LINK KIT LOWDOWN / LIFT UP

- Kit to lift up or lowdown the bike.
- Allows to optimal bike position for a rider by changing seat height, link ratio, caster angle.
- The lowdown type : The amount of descent is designed to maximize the performance without losing the off road function.
- The high lift type : Allows improved nimble steering and better traction as the wheelbase becomes shorter with a steep caster.
- Easy installation with two bolts.
- Black color.

[Important note]

As the link ratio changes, the lowdown type makes the suspension softer, and the high lift type becomes harder. Please re-adjust the front and rear suspension as necessary. Depending on the setting, modification may be required on the side stand in some case.

GYROSTAND2

DRC

GYRO STAND 2

- A folding stand that makes it easy to adjust wheel runout, balance, and check bearings all in one unit.
- It is useful not only for maintenance of laced wheels, but also for restoring old bikes and reassembling rims of other models.
- Rim sizes up to 23 inches and rim widths up to 5 inches can be used.
- Compatible with wheel bearings with an inner diameter of 15 mm or more.
- Wheel balance adjustment is available up to 21 inches.

Part #

D36-52-130

DRC

OPTIONAL 10mm SHAFT SET

- For wheel bearings with inner diameters from 10mm to 15mm.

Part #

D36-52-191

Wheel Balance

Double bearing roller for wheel balancing.

Wheel Truing Bearing Check

Lock wheel rod for wheel truing and bearing check.

MXA RATING

Given its reasonable price, the DRC Gyro stand could pay for itself in a couple of do-it-yourself wheels-truing sessions.

The dial gauge is not included.

A dial gauge can be attached to the pipe in front using a magnetic base. The truing can be taken with higher accuracy.

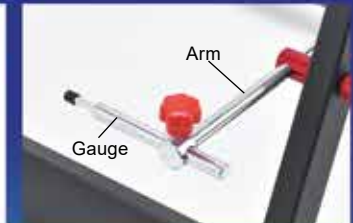

FUNCTION

Folds up to take up no extra space and is easy to carry around.
Width 340mm x Length 370mm x Height 110mm

For runout adjustment and bearing check, set the shaft in the holder and tighten the black knob to fix it.

Adjust the vertical and horizontal runout by moving the arm and gauge to match the wheel.

Shaft and clamp head for bearing inner diameter of 15mm or more.
Clamp the hub with the clamp head and fix the wheel. Optional 10mm shaft set
- For wheel bearings with inner diameters from 10mm to 15mm.
D36-52-191

A ring-type stopper on the shaft prevents from misalignment to the left or right when balancing.

For balancing, the double bearing rollers allow for smooth and accurate operation.

The gauge section can be measured in increments of 5 mm and 2 mm. The tip is rubberized to prevent damage to the rim surface.
