The one-piece upper bar clamp helps stabilize handlebar and prevents bar twist when falling down.

One piece stabilizer is set by 4 special bolts. To securely mount handlebar, the clamp is designed to be tightened first with the 2 front side bolts, then the 2 rear side bolts.

Reinforcing ribs are positioned for maximized strength and minimized weight.

Specially designed lower bar clamp provides the option of 8 different back and forth positions in 5 mm increments. (Maximum)

The two holes allow 2 back and forth positions of the handlebar clamp on the top clamp. Utilizing the optional lower clamp enables different handlebar height positions.

Front fork clamp area designed to securely clamp the front fork. Specially designed front fork bolts are made of stainless to prevent corrosion.

TRIPLE CLAMP KIT 3 mm OFFSET CLAMP

- 3 mm front fork offset clamp increases trail amount, provides quicker and more stable handling for super moto riding.

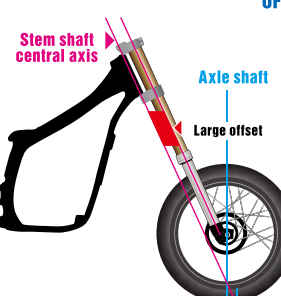

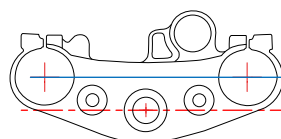

Part #	Bike	Year	Color
ZE14-4253	WR250X (3 mm offset)	07-17	Black

DRZ400SM

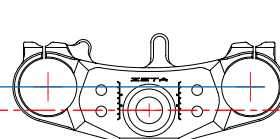

For stock triple clamp

Trail small = Low ground contact feeling
Cornering stability = low
Trail amount

For ZETA offset clamp

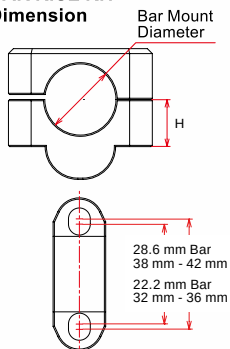

Large trail = high ground contact feeling
Cornering stability = high
Trail amount

In the case of the WR250X, the outer diameter of the tire is reduced from 21 inches to 17 inches of the WR250R, so the casters stand and the trail amount is significantly reduced compared to the WR250R. This makes it easier for the steering wheel to be cut or to be affected by swinging the steering wheel at corners.

By bringing the front fork closer to the steering shaft (offset 3 mm), the trail amount is reduced to 17 inches and the stability is improved. The effect is seen from the middle of the corner to the rise of the corner, enabling stable cornering. In addition, the high-rigidity clamp improves stability and drift controllability in high-speed corners.

FUNCTION

ZETA RACE GRIPS

- Dual compound motocross and enduro racing grip available from ZETA.
- Grip body in gray is made of soft compound to reduce shock, while durable inner layer and grip end improve bar adhesion and give longer grip life.
- The upper half anti-slip diamond pattern provides greater grip, while the waffle pattern on the lower half provides excellent finger grip.
- Incorporates 3 safety wire grooves to allow accurate and secure grip placement.
- Open end design for easy installation of ZETA Armor hand guards.
- Available in 4 different colors.
- Length 119 mm

ZETA GRIP COVER

- Protective cover for the handlebar grip.
- Prevents dirt of the grip during maintenance, etc.
- Neoprene is used for the material, which has excellent elasticity and fits all kinds of grips.
- The material is soft, so it fits easily over the grip and hand, and does not slip easily when snapping the throttle while wrapped around the grip.
- Prevents deterioration of the grip due to UV rays during long-term storage.

Closed End

Non-removable end cap.

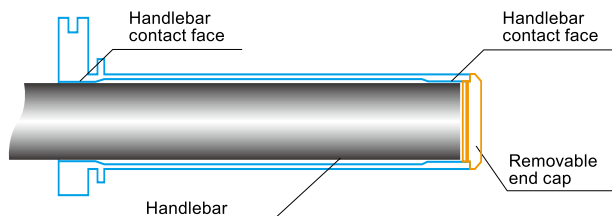

Replacement end cap is not available.

ZETA

ALUMINUM THROTTLE TUBE

- Made of A6061 aluminum with hard anodized finish.
- Removable end cap design allows the use with bar end plugs or aluminum hand guards.
- Quick turn throttle tubes available for dual sport models for better acceleration.
- Special tapered inside tube design keeps the distance between the throttle tube and handlebar, greatly reducing frictional resistance which allows for smoother acceleration.

The brace may become difficult to remove depending on how it is installed and used. It is recommended to apply grease to the brace during installation.

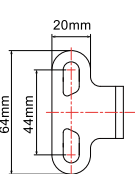

Adjustable and easy to set the best position, Bar mount type mounting bar.

ZETA

ADJUSTABLE MOUNTING BRACKET BAR MOUNT TYPE

- A mounting bar that attaches to handlebar clamps.
- The detailed position adjustment function of each part allows for installation according to the type of mobile device.
- The mount bar can be adjusted back and forth, left and right, allowing the smartphone to be set in the best position for the rider.
- The mounting stay is compatible with handlebar clamps of 22.2mm and 28.6mm in diameter by using the included spacers.
- The main body and mounting bar are made of lightweight, high-strength aluminum.
- The mounting stays and bolts are made of rust-resistant stainless steel.

Part #
ZE60-1020

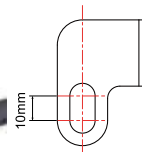

Can be installed in either the left or right mirror hole.
[Please note]
May not be able to be installed on some bikes.

ZETA

ADJUSTABLE MOUNTING BRACKET MIRROR HOLE TYPE

- Mounting bar for 10mm thread diameter mirror holes.
- Each part of the bar has an adjustable function to allow installation on either side.
- The mounting position can be finely adjusted according to the type of smartphone holder.
- The mounting bar can be adjusted back and forth, left and right, to secure the smartphone in the best position for the rider.
- The main body and mounting bar are made of lightweight, high-strength aluminum.
- The mounting stays and bolts are made of rust-resistant stainless steel.

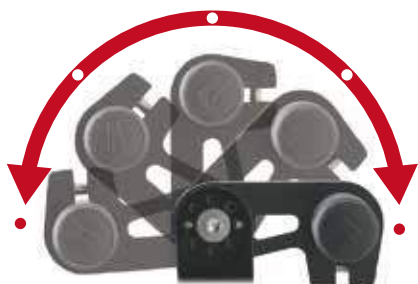

Part #
ZE60-1010

Can be installed in either the left or right mirror hole.
[Please note]
May not be able to be installed on some bikes.

Adjustable and easy to set the best position

Position back and forth or up and down as you like

The 5 position adjustment function allows you to set the position back and forth or up and down as you like. This makes it compatible with various types of smartphone holders and it also allows for detailed position adjustment that was not possible before.

Stepless adjustable bar

Shaped for any left or right side. The 22.2 mm diameter, approximately 110 mm wide mounting bar is steplessly adjustable. The stepless adjustment increases the flexibility of mounting mobile devices.

Mobile devices on the brace too! The most powerful helper to make the position of the mount more flexible

ZETA

CONVERSION ADAPTER FROM $\phi 13\text{mm}$ TO $\phi 22.2\text{mm}$

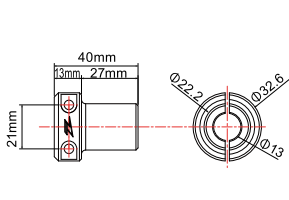

- A mounting bar that attaches to the handlebar brace. However, for those who want more freedom and flexibility, we have introduced a compact conversion adapter that is held between two parts of the handlebar brace.
- Compact conversion adapter.
- Easily converts popular off-road handlebar braces with a diameter of 13mm to a common handlebar diameter of 22.2mm.
- Since it is a hold type, it can be attached to non-dissembled type braces and the mounting position can be easily converted.
- The compact design allows for multiple attachments for greater flexibility and ease of use.
- The high quality finish of CNC machined aluminum creates a sense of luxury that goes beyond the realm of just a convenient item.
- Can be installed on any bar with a diameter of 13mm. Converts diameter to 22mm.
- Easy to change the mounting position.
- The compact design allows for multiple installation.

[When used with bar pad]
- ZETA Mini Bar Pad (ZE47-9232)
- Renthal bar pad 8.5 inches

The above items and this product can be used together as long as there is one of each.

Part #

ZE60-1050

[Please note]
- The bar pad may not be used depending on the size.
- The brace may not be 22.2mm in diameter due to measurement error in the brace diameter.

ANTLER HAND GUARD

- Made from high quality, durable and lightweight polyamide material.
- Multi-position mount allows guard to mount without interfering with natural handlebar flex, helping to reduce arm fatigue.
- Designed to be used with our entire line of Armor Hand Guards Protector.
- All kinds of armor guard series protector can be installed.
- Can be used on 22.2 mm and 28.6 mm handlebars.
- **Inner diameter of 13.5 mm to 16 mm**

Part #

ZE73-1001

* When installing on trail models, ensure there is adequate space between the switches.

* This 100% polyamide guard contains no metals.

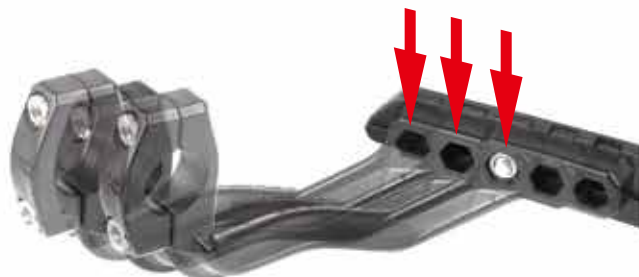

* Cannot be mounted using the X3 mount stay

KEEP HANDLEBAR FLEX

Made of TPU with excellent impact resistance. Balance between rigidity and flexibility. Delivers stable performance even at low temperatures. By curving the shape of the grip end part, it does not interfere with the "door knob grip" when tilting or holding down.

MOUNTING POSITION

"Made of TPU mount stay has a shape that avoids brake hoses and wires. The tip position can be selected from three mounting positions. Both standard diameter bar (22.2 mm) and large diameter bar (28.6 mm) are supported. W adaptive diameter: 22.2mm-23.5mm"

ALUMINUM BAR END PLUG

The high-strength aluminum bar end and 3mm-thick spacer protects the guard body from falls and other shocks are lightweight and strong. Compatible with aluminum handlebars with an inner diameter of 13.5 mm to 16 mm.

PROTECTOR

An optional armor hand guard protector can be attached.
(Scudo protector cannot be installed)

**It can be use for
both touring and dirt riding.**

The two flaps can be adjusted to accommodate different positions.

Dirt Riding

Wide wrist adjustment allows for better handling and does not interfere with riding in the dirt. In the event of an unexpected fall, it is easy to remove your hands from the hand warmer for safe riding."

Touring

Narrow wrist adjustment prevents running wind from entering the hand warmer, improving cold and wind resistance.

Velcro wrist opening adjustment.

When touring, the wrist opening can be adjusted narrower to prevent the wind from entering the hand warmer and improves the protection against cold and wind. The large size L can narrow the outside of the wrist opening more than the size M. The capability makes it ideal for long hours of touring. When riding in the dirt, the wrist opening can be adjusted wider to improve maneuverability and not interfere with riding. In the event of an unexpected fall, it is easy to remove your hands from the hand warmer and ride safely.

Save space around switches.

The space around the switches is designed for ease of operation. The wrist opening can be adjusted with a velcro system to make it larger or narrower. Be sure to check that there is no interference with each move before use.

Easy handling even when standing ride.

The wrist area is made of flexible neoprene fabric. Minimizes impact on riding position and provides both ease of movement and thermal protection.

Reflectors

Reflectors are equipped on the front and sides of the cover to increase visibility when riding at night.

Convenient inside pocket

Inside pocket, good to put a tiny items such as instant heat pad, small purse and cards.

CHAIN GUIDE

- Chain guide composed of TPU, excellent in wear resistance and restorability and duralumin plate with CNC processing.
- Reduce the load on the swing arm attachment stay by using TPU material that is durable against impact and wear.
- 3D design slider reduces the impact of the debris coming from all directions.
- Maintains its guiding performance that requires rigidity by a duralumin plate designed exclusively for the model.

* Please apply removable low to medium strength screw lock for installation.
* Please check the slider wear periodically.
* In the case of trail models, guiding performance is enhanced as much as racers.

Angles in the front avoid the impact, and the sleek 3D design reduces the catching and damage risk.

Its elastic structure avoids interference trouble with sprocket, compared to one made of aluminum when catching the debris.

The insert nut is used on the back. Eliminating protruding bolts and nuts, smooth head shape reduces catch during tire change.

The slider bottom has a reduced contact area in consideration to the ground clearance.

REPLACEMENT CHAIN GUIDE BLOCK

*Replacement.
The slider covers all line-up model.

1 The range of change of the number of the rear sprocket teeth is less than that of the stock chain guide. When the number of teeth is increased, the position of the chain adjuster may move forward, causing interference.

2 Since the guide performance is improved as much as the racer, the range of change of the number of rear sprocket teeth is less than the stock. If the position of the chain adjuster is large and forward when the number of chains is increased, it may interfere.

FORGED ALUMINUM KICK STAND

- Lines up with 25 mm shorter than the stock. (Some models have high lift standards.)
- Avoids an unstable bike even during changing of the bike height. Can also be used safely on rough roads by selecting the OPTION TIP.
- A2014 aluminum is used, to maintain strength and durability.

* The inclination varies depending on the model. If the length of the TIP does not work well, see the OPTION TIP conversion table below and change the TIP.

FRONT FORK TOP CAP INITIAL ADJUSTER

- Allows to adjustment of the front suspension preload.
- The preload adjustment range is set from -5mm to +10mm, and it supports various situations such as a light weight rider or trail rider.
- An air bleeder is equipped to release pressure in the suspension without special tools.
- Setting initial preload to the spring is to reduce (Nose dive) spring bottoming out by heavy braking.
- 1 set for left and right.

ZETRA **AIR BLEED KIT**

- This air bleed kit allows you to vent the pressure that builds up due to heat changes inside the fork during long runs such as enduro races with a single push while riding.
 - The clamp can be attached to the stock lever holder on either the brake or clutch side.
 - The nylon sleeve on the inside of the clamp reduces the risk of lever damage by allowing the lever holder to rotate in the event of a strong impact during a fall.
 - Air hoses and one-touch joints are included to connect to the left and right front fork air bleeds.
- Compatible with KYB, SHOWA and WP.
Cannot be installed on MAGURA hinge type.

ZE56-32250**ZETA REAR SUSPENSION LOWERING OUTER KIT**

- Lower your rear suspension without disassembling the rear shock unit.
- Push down seal head from out side of damper, and install this kit to lower your suspension 30 mm while keeping its function.
- Make the rear suspension's fully extended length shorter, but not change length when the shock is shortened. Keep clearance between wheel and under fender even upon lowering.
- Can be used with lowering link.
- Available in 46 mm size for KYB / WP and 50 mm size for KYB / SHOWA / WP rear suspension.

WP REAR SUSPENSION GAS VALVE

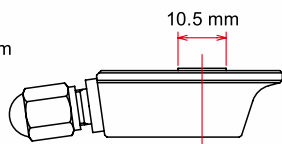

- WP made rear shock sub tank gas sealed valve conversion adapter (Schrader type).
- Allows Nitrogen gas fitting through a universal schrader valve without WP special tools.
- By adding the prevent-falling design, the reliability is improved.
- Lineup of two types: Dent and Flat.

LOWDOWN SPRING for CT125

- Lowdown spring for CT125 Hunter Cub.
- By replacing the springs lower the height by about 20mm.*1
- Three different spring rates provides soft at the beginning of compressing and strong when deeply compressing.
- This improves reaching the ground with feet without losing its performance.
- The performance will work for shorter riders in city use.
- The stock stand can be used.
- The front spring can be easily replaced by simply removing the fork top cap.*2

[Attention]

Assemble with the narrower side facing up.

Lowered

The actual amount of lowering will be affected by body weight.

*1 When a rider weighing 70kg rides the bike, it is lowered about 20mm. The actual amount of lowering will be affected by the rider's weight.

*2 Since the front spring has a reduced stroke, adding 15-20ml of fork oil (viscosity: 10w) to each side will provide a smoother suspension effect with less bottoming out.

OFF-ROAD SUSPENSION KIT CROSS CUB 110

The front is a high lift specification that increases the stroke amount and overall length by +30 mm by changing to a long type cylinder. A special front spring is set, and the spring rate is changed to 20% higher than the stock one according to the extended stroke amount. Along with this, the effectiveness of the damper is also adjusted to enable smooth movement with a long stroke, improve road followability on dirt roads, and suppress bottom thrust.

- High lift specification that extends the total length by +30 mm by replacing it with a strong rear shock bracket.
- Needle bearing is already installed in the shock mounting part at the bottom of the bracket.
- Since it rotates without resistance compared to the standard rubber bush, it absorbs impact more smoothly without giving unnecessary resistance to the compression and rebound operation of the damper.

ED PROGRESSIVE SPRING

- A spring with progressive characteristics for enduro.
- The standard spring has a characteristic that the load linearly stiffens in proportion to the amount the suspension sinks, whereas the progressive spring has a characteristic that it is soft when it starts to sink and strong when it sinks deeply.
- With a small gap, the suspension moves well and absorbs well, so there is less strain on the body and the center of gravity when driving is lower, allowing stable cornering.
- It is difficult to hit the bottom when a large impact such as when passing a large gap or landing a jump.
- In addition, since the beginning of compressing is soft, foot contact is also improved.

ED SHOCK SPRING ENDURO SOFT

- Ideal for YZ250FX/450FX users who feel that the normal suspension is hard.
- Since the stock option parts do not have soft springs set, they can be used as setting parts for hard road surfaces such as scree.
- In addition, the suspension tends to be compressed, so it provides a low-down effect.

BOLT&NUT SERIES

- High quality light weight titanium bolts, nuts, washers and pivot pins available from ZETA.
- Brake disc bolt kit and sprocket kit available for specific models.
- Made of hot forged Ti-6AL-4V for a durable and extremely light weight product.
- High precision CNC machined bolt and nut head, head size is one size smaller than industrial standard for reduced weight.

Hot forging, CNC machining, thread rolling

ZETA titanium product is designed to be light weight with no decoration. Titanium products are not only machined but also hot forged to provide more tensile strength than material strength. Bolt and nut are designed with a smaller CNC machined head for a lighter design.

Titanium type and strength difference between other material.

Pure Titanium	Lower price than other titanium alloy, great corrosion resistance, but less strength.
Alfa alloy	Great creep resistance and welding work, but bad workability.
Beta alloy	Most durable titanium alloy, easy workability, but high production cost.
Alfa beta alloy	Great durability, ductility, toughness and workability. Zeta Titanium product is made of this material, Ti-6AL-4V.

Ti-6AL-4V

ZETA titanium products are made of Ti-6AL-4V.

This chemical notation means this titanium includes 6% aluminum (AL) and 4% vanadium (V). This material is light weight and durable.

It is used in aircraft and space industries, nuclear industry, industrial turbine, race car and motorcycle etc.

CHAIN ADJUSTER BOLT

- By using titanium bolts the unsprung weight is reduced, and compared to stock bolts, strength is increased and visual appeal is enhanced.
- Nut is designed one size smaller, for reduced weight and compactness. And because titanium bolts form a non-conductive coating on the surface, it will not rust.
- M8 is used by the four main Japanese manufacturers of off-road, and also some on-road manufacturers (Axle block bolt adjustment type vehicle).
- M10 is mainly used on KTM off-road models, and Husqvarna.
